**(54) SYSTEM FOR SUPPLYING LEARNING DATA FOR GAME BASED ON NETWORK**

**(57) Abstract:**

**PURPOSE:** A system for supplying learning data for a game based on a network is provided to supply an effective learning motive for a game user, who wishes to obtain an item of a game and raises a character, and raise a level of the game by transmitting a selected game to a communication device and supplying upgraded learning data for a game to the user.

**CONSTITUTION:** A communication network{10} connects to communication lines of an

unspecified number of the general public and performs a data communication interactively. A game user communication device(20) up-loads information data inputted by the user for a member authentication to an exterior, downloads a game from an exterior through the communication network(10), and displays the game. An operator server(30) performs a member authentication based on the information data inputted by the game user, downloads the game to the game user communication device(20) through the communication network(10), and transmits learning data for a game requested by the user for upgrading the game to the game user communication device(20). A game operator DB(40) constructs a database based on learning data for a game including various kinds of games and learning questions.
